

## Fire Planning - Animal Safety

In which housed locations may animals be found on site (Including domestic animals)	Outcomes	Considerations	Actions for plan
Which outside spaces in close proximity to buildings could animals be found?			
Maximum of how many animals may be found in these locations (day/night)?			
What process will ensure information about actual animal numbers if there is a fire?			
What housing or areas should be considered high risk in the event of fire?			

Giving consideration to prevailing wind direction, what areas might be considered as immediate and/or subsequent refuges in a fire situation?	Outcomes	Considerations	Actions for plan
What routes / access points would be suitable to use for an evacuation?			
In the event of limited staff or rapid intervention, which routes might be utilised to safely herd large animals to a contained refuge?			
Are there any special considerations in regard to animal compatibility?			
Are any animals considered higher risk to staff with restrictions on who can handle them?			

In the event of an evacuation, is there immediate access to handling equipment such as leads / cages / halters / improvised halters?	Outcomes	Considerations	Actions for plan
What frequency and type of evacuation drills would be useful in testing plans?			
In the event animals suffer from smoke or heat injuries, what veterinary arrangements are in place?			

Notes:
